

Safe & Healthy Home Kit

DRY

Remove excess moisture to protect your home from mold, mites and more.

- Ensure your gutters and downspouts are cleaned in the spring and fall.
- Use caulk to seal up leaky windows. On windows with more extensive gaps, use weather-strip.
- Use DampRid* to absorb excess moisture in the air and to create and maintain an optimal humidity level in your home.

SAFE

Improve home safety and reduce the risk of fire with essential equipment and a plan.

- Make a home safety plan with your family that includes an escape route and a meeting point. Install night lights so when an emergency occurs, you will have an illuminated path out of your home.
- Install at least one smoke detector on every level of your home, including the basement.
- Add anti-slip treads to your bathtub or shower to reduce your risk of falling.

Use: First aid kit, Fire extinguisher, Flashlight, Night light, Smoke detector, Tub treads and WOAA Weather Radio

CLEAN

Help reduce pest infestations and exposure to contaminants with a clean home.

- Use Formula 409 Cleaner* to clean grimy light switches, stubborn soap residue and hard to remove stains.
- Microwave a wet sponge for two minutes to kill germs.
- Use Disinfecting wipes to clean countertops and areas where food preparation occurs

Use: Formula 409 Cleaner*, Disinfecting wipes, Gloves and Sponges

VENTILATED

Reducing air leakage in your home creates a healthier indoor environment. Caulking and weather-stripping are two simple and effective air sealing techniques.

- Use a candle or piece of thread on a windy day to identify drafty doors and windows, then seal leaks with caulk or weather-strip.
- In the winter, run your ceiling fan clockwise to push warm air down. In the summer, run your fan counterclockwise to feel cooler.
- Reduce heat and energy loss by using weather-stripping to seal your attic hatch.
